You have just created a new log bucket to replace the _Default log bucket. You want to route all log entries that are currently routed to the _Default log bucket to this new log bucket, in the most efficient manner. What should you do?

- A. Create exclusion filters for the _Default sink to prevent it from receiving new logs. Create a user-defined sink, and select the new log bucket as the sink destination.
- B. Disable the _Default sink. Create a user-defined sink and select the new log bucket as the sink destination.
- C. Create a user-defined sink with inclusion filters copied from the _Default sink. Select the new log bucket as the sink destination.
- D. Edit the _Default sink, and select the new log bucket as the sink destination.

Selected Answer: D

D is most efficient and is possible to do. I just checked in GCP b/c people using AI as their source in this forum is a major red flag
