EXAM PROFESSIONAL CLOUD SECURITY ENGINEER TOPIC 1 QUESTION 127 DISCUSSION

Actual exam question from Google's Professional Cloud Security Engineer

Question #: 127

Topic #: 1

[\[All Professional Cloud Security Engineer Questions\]](#)

You want to prevent users from accidentally deleting a Shared VPC host project. Which organization-level policy constraint should you enable?

- A. compute.restrictSharedVpcHostProjects
- B. compute.restrictXpnProjectLienRemoval
- C. compute.restrictSharedVpcSubnetworks
- D. compute.sharedReservationsOwnerProjects

Answer is (B).

This boolean constraint restricts the set of users that can remove a Shared VPC project lien without organization-level

permission where this constraint is set to True.

Selected Answer: B

B is the answer.

<https://cloud.google.com/resource-manager/docs/organization-policy/org-policy-constraints#constraints-for-specific-services>
- constraints/compute.restrictXpnProjectLienRemoval

- Restrict shared VPC project lien removal

This boolean constraint restricts the set of users that can remove a Shared VPC host project lien without organization-level permission where this constraint is set to True.

By default, any user with the permission to update liens can remove a Shared VPC host project lien. Enforcing this constraint requires that permission be granted at the organization level.

Selected Answer: B

To prevent users from accidentally deleting a Shared VPC host project, you should enable the compute.restrictXpnProjectLienRemoval organization-level policy constraint . This policy constraint limits IAM principals who can remove the lien that prevents deletion of host projects . By default, a project owner can remove a lien from a project, including a Shared VPC host project, unless an organization-level policy is defined to limit lien removal .

Therefore, option B is the correct answer.
