### EXAM PROFESSIONAL CLOUD SECURITY ENGINEER TOPIC 1 QUESTION 26 DISCUSSION

Actual exam question from Google's Professional Cloud Security Engineer

Question #: 26

Topic #: 1

[\[All Professional Cloud Security Engineer Questions\]](#)

An organization is migrating from their current on-premises productivity software systems to G Suite. Some network security controls were in place that were mandated by a regulatory body in their region for their previous on-premises system. The organization's risk team wants to ensure that network security controls are maintained and effective in G Suite. A security architect supporting this migration has been asked to ensure that network security controls are in place as part of the new shared responsibility model between the organization and Google Cloud.

What solution would help meet the requirements?

- A. Ensure that firewall rules are in place to meet the required controls.
- B. Set up Cloud Armor to ensure that network security controls can be managed for G Suite.
- C. Network security is a built-in solution and Google's Cloud responsibility for SaaS products like G Suite.
- D. Set up an array of Virtual Private Cloud (VPC) networks to control network security as mandated by the relevant regulation.

Correct Answer is (C):  
GSuite is SaaS application.

Shared responsibility "Security of the Cloud" - GCP is responsible for protecting the infrastructure that runs all of the services offered in the GCP Cloud. This infrastructure is composed of the hardware, software, networking, and facilities that run GCP Cloud services.

Answer is C- Review this Youtube Video- <https://www.youtube.com/watch?v=D2zf0SgNdUw>, scroll to 7:55, it would show you the Shared Responsibility model- With Gsuite being a SaaS product, Network Security is handled by Google

This thread suggests option "D" to be the only viable option. Now what ??

**Selected Answer: B**

Shared responsibility model. Network security is not only Google's responsibility. As easy as that.

Need to change, as above if Google Workspace is considered as a SaaS then network security is the responsibility of provider. C is correct.

FatCharlie 4 years, 2 months ago

Except for C, none of the options are possible in G Suite. There are no firewall, VPC, or Cloud Armor options there as far as I know.
