Answer is (D).

In dry run mode, requests that violate the perimeter policy are not denied, only logged. Dry run mode is used to test perimeter configuration and to monitor usage of services without preventing access to resources.

Selected Answer: D

Enforced mode is the default mode for service perimeters. When a service perimeter is enforced, requests that violate the perimeter policy, such as requests to restricted services from outside a perimeter, are denied.

Dry run service perimeters are used to test perimeter configuration and to monitor usage of services without preventing access to resources.

Answer : D
