### EXAM PROFESSIONAL CLOUD SECURITY ENGINEER TOPIC 1 QUESTION 194 DISCUSSION

Actual exam question from Google's Professional Cloud Security Engineer

Question #: 194

Topic #: 1

[\[All Professional Cloud Security Engineer Questions\]](#)

You plan to synchronize identities to Cloud Identity from a third-party identity provider (IdP). You discovered that some employees used their corporate email address to set up consumer accounts to access Google services. You need to ensure that the organization has control over the configuration, security, and lifecycle of these consumer accounts.

What should you do? (Choose two.)

- A. Mandate that those corporate employees delete their unmanaged consumer accounts.
- B. Reconcile accounts that exist in Cloud Identity but not in the third-party IdP.
- C. Evict the unmanaged consumer accounts in the third-party IdP before you sync identities.
- D. Use Google Cloud Directory Sync (GCDS) to migrate the unmanaged consumer accounts' emails as user aliases.
- E. Use the transfer tool to invite those corporate employees to transfer their unmanaged consumer accounts to the corporate domain.

BE

- "Reconcile Existing Accounts" refers to the process of comparing and aligning accounts between two systems.  
- "Transfer Tool" is the official method recommended by Google to convert unmanaged consumer accounts into managed accounts within your domain. It allows you to invite employees to migrate their accounts, giving your organization control over configuration, security, and lifecycle.

Selected Answer: B

B & E,

To ensure control over the configuration, security, and lifecycle of consumer accounts created with corporate email addresses, you should reconcile accounts that exist in Cloud Identity but not in the third-party IdP (B). This helps to align accounts and ensure consistent management. Additionally, you can use the transfer tool to invite employees to transfer their unmanaged consumer accounts to the corporate domain (E), which allows you to bring these accounts under the organization's control in Cloud Identity.
