📄 EXAM PROFESSIONAL CLOUD SECURITY ENGINEER TOPIC 1 QUESTION 30 DISCUSSION

Actual exam question from Google's Professional Cloud Security Engineer

Question #: 30

Topic #: 1

[\[All Professional Cloud Security Engineer Questions\]](#)

A company migrated their entire data/center to Google Cloud Platform. It is running thousands of instances across multiple projects managed by different departments. You want to have a historical record of what was running in Google Cloud Platform at any point in time.

What should you do?

- A. Use Resource Manager on the organization level.
- B. Use Forseti Security to automate inventory snapshots.
- C. Use Stackdriver to create a dashboard across all projects.
- D. Use Security Command Center to view all assets across the organization.

'B' is the correct answer. Only Forseti security can have both 'past' and 'present' (i.e. historical) records of the resources.

Forseti is outdated, no one uses it anymore

Outdated questions- you should use asset inventory now.

Selected Answer: B

B.

Only Forseti keeps a complete record over time. SCC gives you how it looks now, but you cannot look into the past, which the scenario in the question requires.

Selected Answer: D

Old question. Forseti? SCC is the newest kid on the block and fits best here.

Selected Answer: B

To maintain a historical record of what resources were running in Google Cloud Platform (GCP) at any point in time, you need a solution that periodically takes inventory snapshots of all assets. Forseti Security is specifically designed to automate this process, making it the best option for this use case.

D - SCC is supported by Gemini and not Forseti.

weird, Forseti - deprecated on Oct 2018, why was it even considered as an answer! 😊🤔

<https://forsetisecurity.org/news/2019/02/18/deprecate-1.0.html>

I'm going with option D

Selected Answer: B

"B" is the correct answer.

Forseti has been deprecated however it's capabilities and features (like asset inventory) have been incorporated into Security Command Center.

Correct is A

Problem with Forseti - it's a third party tool, and it's sunset archived now due to lack of involvement. Do you really think Google would care to place it in test?

Using Resource Manager on the organization level is a good way to have a historical record of what was running in Google Cloud Platform at any point in time. This is because Resource Manager provides a centralized view of all of your organization's resources, including projects, folders, and organization policies. It's a native tool, so I would go for answer A.

B is the correct answer.

"Keep track of your environment

Take inventory snapshots of your Google Cloud Platform (GCP) resources on a recurring cadence so that you always have a history of what was in your cloud."
