Ans C is correct, you can define a custom log bucket and mention the retention policy for any number of years (range - 1 day to 3650 days). Underlying these custom define log bucket is also created within Cloud Storage. As per the question you can retain log for 2 years in Stackdriver Logging which is aka Cloud Logging, and then later archive to cold line storage if there is a requirement.

Default retention for logging is 30 days because it is expensive to hold the logs there for longer duration. Bucket is always the cheapest option.
