📄 **EXAM PROFESSIONAL CLOUD SECURITY ENGINEER TOPIC 1 QUESTION 236 DISCUSSION**

Actual exam question from Google's Professional Cloud Security Engineer
Question #: 236
Topic #: 1
[All Professional Cloud Security Engineer Questions]

You are deploying regulated workloads on Google Cloud. The regulation has data residency and data access requirements. It also requires that support is provided from the same geographical location as where the data resides.

What should you do?

A. Enable Access Transparency Logging.

B. Deploy Assured Workloads.

C. Deploy resources only to regions permitted by data residency requirements.

D. Use Data Access logging and Access Transparency logging to confirm that no users are accessing data from another region.

Selected Answer: B

We should deploy Assured Workloads.

Assured Workloads helps businesses in regulated sectors meet compliance requirements by providing a secure and compliant environment with features like data residency controls for specific compliance types, data and personnel access controls, and real-time monitoring for compliance violations. It ensures that only Google Cloud support personnel meeting specific geographical locations and personnel conditions support customers' workloads.

We can select the regulatory framework you need to follow and Assured Workloads will automatically configure and deploy the controls needed to help meet your requirements.

Selected Answer: B

The correct answer is B. Deploy Assured Workloads.

Assured Workloads for Google Cloud allows you to deploy regulated workloads with data residency, access, and support requirements. It helps you configure your environment in a manner that aligns with specific compliance frameworks and standards.
