📄 EXAM PROFESSIONAL CLOUD SECURITY ENGINEER TOPIC 1 QUESTION 277 DISCUSSION

Actual exam question from Google's Professional Cloud Security Engineer

Question #: 277

Topic #: 1

[All Professional Cloud Security Engineer Questions]

You work for a large organization that is using Cloud Identity as the identity provider (IdP) on Google Cloud. Your InfoSec team has mandated the enforcement of a strong password with a length between 12 and 16 characters for all users. After configuring this requirement, users are still able to access the Google Cloud console with passwords that are less than 12 characters. You need to fix this problem within the Admin console. What should you do?

A. Review each user's password configuration and reset existing passwords.

B. Review the organization password management setting and select Enforce password policy at the next sign-in.

C. Review each user's password configuration and select Enforce strong password.

D. Review the organization password management setting and select Enforce strong password.

Selected Answer: B

According to the question, strong password policy is already enforced and we only need to fix the ones that still use short passwords, therefore option D is best.
